Sequence 3, Application US/08549846
Patent No. 6083751
CENERAL INFORMATION:
APPLICANT: FELDHAUS, ANDREW L.
APPLICANT: JONES, LORI A.
TITLE OF INVENTION: SELECTIVITY-ACTIVATABLE T(h)-INDEPENDENT CYTOTOXIC T CELLS
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSER: MORRISON & FOERSTER
STREET: 755 PAGE MILL ROAD
CITY: PALO ALTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 68.0%; Score 20.4; DB 4; Length 1514; Best Local Similarity 95.5%; Pred. No. 2.9; Matches 21; Conservative 0; Mismatches 1; Indels 0.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, Application US/08549846
Sequence 2, Application US/08549846
Batent No. 608371
GENERAL INFORMATION:
APPLICANT: FELDHAUS, ANDREW L.
APPLICANT: JONES, LORI A.
TITLE OF INVENTION: CHIMERIC RECEPTORS FOR THE GENERATION OF
TITLE OF INVENTION: SELECTIVITY-ACTIVATABLE T(h)-INDEPENDENT CYTOTOXIC T CELLS
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSE: MORRISON & FOERSTER
STREET: 755 PAGE MILL ROAD
CITY: PALO ALTO

Sequence 3420, Application US/09489039A

Sequence 3420, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
FILE REFERENCE: 2709.2004001
FILE REFERENCE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR PLING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 3420
ILBRICH: 939
                                                                                                  Sequence 19421, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 19421
LENGTH: 534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              57.3%; Score 17.2; DB 4; Length 534; 86.4%; Pred. Sequence 2, Application US/0866082B
Patent No. 516770
GENERAL INFORMATION:
APPLICANT: YOSHIKAWA, WATARU
APPLICANT: TAKEHARA, TOYOHIRO
APPLICANT: TAKEHARA, MCHIO
TITLE OF INVENTION: MACROPHAGE STIMULATING PROTEIN VARIANT AND
TITLE OF INVENTION: METHOD FOR PRODUCING THE SAME
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: LEYDIG, VOIT & MAYER, LTD.

Patent No. 5315000
GENERAL INFORMATION:
APPLICANT: Degen, Sandra J. F.
TITLE OF INVENTION: Gene for a growth factor and its cDNA and
TITLE OF INVENTION: protein
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: Gregory Lunn
STREET: Wood, Herron & Evans, 2700 Carew Tower
CITY: Cincinnati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                     IOD: experimental Includes five polymorphisms at the nucleotide Invelored five polymorphisms at the nucleotide level; one of which results in an amino acid substitution (nu level; one of which contains the identical sequence with 619).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1, Application US/08184012C

Sequence 1, Application US/08184012C

Patent No. 5606029

GENERAL INFORMATION:

APPLICANT: Degen, Sandra J. F.

TITLE OF INVENTION: Gene for a growth factor and its cDNA and ITLE OF INVENTION: protein

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSE: Gregory Lunn

STREET Wood, Herron & Evans, 2700 Carew Tower

CITY: Cincinnati
                                                                                                                                                                                                                                                                                                                                                                                                                                            57.3%; Score 17.2; DB 1; Length 2219; 73.3%; Pred. No. 1.1e+02;
                                                                                                                                                                                                                                                                                                      PUBLICATION INFORMATION:

Sequence 1, Application US/08334177
Patent No. 5696086
GENERAL INFORMATION:
APPLICANT: Avraham, Hava Karsenty
APPLICANT: Godowski, Paul J.
TITLE OF INVENTION: Methods and Kits Using Macrophage Stimulating Protein
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genentech, Inc.
STREET: 460 Point San Bruno Blvd
CITY: South San Francisco
STATE: California
COUNTRY: USA

INFORMATION FOR SED ID NO: 7:
SEQUENCE CHARACTERISTICS:
LENGTH: 2262 base pairs
TYPE: NUCLEIC ACID
STRANDEDNESS: single
TOPOLOGY: Intear
MOLECULE TYPE: cDNA to mRNA
DESCRIPTION: Identical to sequence ID NO: 1: with 5' and 3'
DESCRIPTION: adaptors added to make a full-length CDNA
ANTI-SENSE: no
ORIGINAL SOURCE:
ORGANISM: human
DEVELOPMENTAL STACE: fetal
TISSUE TYPE: liver
INMEDIATE SOURCE:
INMEDIATE SOURCE:
ILIBRARY: CDNA
CLONE: #33 including 5' and 3' adaptors
ILIBRARY: CDNA
TELEVANT RESIDUES IN SEQ ID NO: 7: FROM 1 TO 2262
US-07-882-925A-7

i Sequence 107348 Application US/10027632

j Bublication No. US20020198371A1

GENERAL INFORMATION:

I TILE OF INVENTION: Identification and Mapping of Single Nucleotide

TITLE OF INVENTION: Identification and Mapping of Single Nucleotide

TITLE OF INVENTION: Polymorphisms in the Human Genome

TITLE OF INVENTION: Polymorphisms in the Human Genome

TITLE OF INVENTION: 108027.129

CURRENT FILING DATE: 2000-07-12

PRIOR APPLICATION NUMBER: US 60/198,676

PRIOR FILING DATE: 2000-04-20

PRIOR FILING DATE: 2000-04-20

PRIOR PLING DATE: 2000-03-24

PRIOR PRIUM APPLICATION NUMBER: US 60/193,483

PRIOR PRIUM DATE: 1999-11-23

PRIOR PLING DATE: 1999-11-23

PRIOR FILING DATE: 1999-09-28

PRIOR FILING DATE: 1999-09-28

Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared
DNA library constructed at TIGR. Clones will be available for
distribution through Research Genetics, Alabama, USA. Sheared DNA
end sequences search page: http://www.tigr.org/tdb/mdb/tbdb/.
Seq primer: M13-Reverse
Class: shotgun.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             749 bp mRNA linear EST 02-JUL-2003 tric087xj04 T.reesei mycelial culture, Version 3 april Hypocrea jecorina cDNA clone tric087xj04, mRNA sequence. /note="vector: pUC18; Site 1: Smal; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (approx 2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shocgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."
